

Made for Harshitha, on Mac or Windows

Harshitha's Career Hub

Hi Harshitha! This is your own app for the job hunt. It finds marketing jobs that match your resume, signs you in, fills applications and uploads your resume, one job or many in a row. It reads your job Gmail and moves every application along as companies reply. **You check everything before anything is sent.**

Home: your job hunt at a glance

What you need

	Details
A Mac or Windows laptop with Google Chrome	Chrome is free from google.com/chrome .
The Career Hub folder	From the zip file.
Your resume as a PDF	You add it inside the app.
15 minutes, once	For setup. After that, one double-click.

A quick tour

In the sidebar	What it's for
Home	Your funnel (saved, applied, heard back, interviews, offers), what needs you, and your inbox. Paste a link at the top to apply straight away.
Apply	Paste one link or many. Save links for later and apply to all of them in one go.
Find jobs	Reads your resume and finds new jobs that fit, with a match score for each. Also shows jobs from your LinkedIn, Indeed and Naukri alert emails.
My jobs	A board of every application. Drag a card to change its stage; click it for emails and notes.
Profile	Your details, your files (resume, cover letter) and the answers the app remembers.
Settings	Appearance (light or dark), job email, logins, job search, daily limit, AI helper, help, updates and what's new.
Quick actions	Press Ctrl+K (⌘K on Mac) and type what you want, like "dark" or "email".
Activity	Everything the app is doing, step by step. Useful if something looks stuck.
Report a problem	Sends the activity log and screenshots to your helper in one click.

Shortcuts: press 1 to 6 to jump between pages, Ctrl+K (⌘K on Mac) for quick actions, Esc to close a panel. Quick actions, Activity and Report a problem are under More in the sidebar. When the app asks a question with options, press the option's number.

Quick actions

What's in the folder

File or folder	What it's for	You...
Setup (Mac) / Setup (Windows)	Installs what the app needs.	Double-click once.
Open Career Hub (Mac) / (Windows)	Opens the app.	Double-click every time.
career_hub.py, careerhub, ui	The app itself.	Leave alone.
Harshitha's Data	Everything personal: your data, files, summaries, logs and backups.	Leave alone. Never delete it.

Part A: one-time setup

About 15 minutes.

STEP 1 Put the folder on your Desktop

1. Double-click `career_hub.zip` in Downloads. A Career Hub folder appears.
2. Drag it onto your Desktop.

STEP 2 Double-click "Setup (Mac)"

A Terminal window installs everything (2 to 10 minutes). Wait for **ALL SET, HARSHITHA!**

Mac says the file "can't be opened" or "could not verify" it?

Normal for downloaded files. Click Done.

Newer Macs: open System Settings, then Privacy & Security, scroll down, click Open Anyway next to the Setup file, enter your Mac password, click Open.

Older Macs: right-click the Setup file, choose Open, then Open again.
Only needed once.

If you see	Do this
A request to install command line developer tools	Click Install, then Agree. When it finishes, double-click Setup again.
"Terminal would like to access files..."	Click Allow.

STEP 3 Open the app and fill in your profile

Double-click **Open Career Hub (Mac)**. A small Terminal window opens too and tucks itself into the Dock: that runs the app, so don't close it. The app opens on Profile.

- Fill in your details. Anything you leave empty, the app asks about when a site needs it.
- A yellow bar appears when you change something: click **Save changes**.

Profile

Used to fill every application. Leave a box empty and the app asks when a site needs it.

About you

First name: Harshitha

Last name:

Full name: Harshitha

Email (also used for job-site accounts): harshitha.jobs@gmail.com

Phone number:

Country phone code: India (+91)

Address

Street address:

City:

State:

PIN / ZIP code:

Country: India

Add your resume

Open Resume in the side bar, then the Files tab, and drop your resume PDF onto the box (or click it to choose). It's picked as your resume automatically and saved by itself. Add a cover letter the same way if you have one.

Work and education: in Profile, open Work and education and press Read from my resume. Check each job and degree, fix anything wrong, then press Save. Sites like Workday ask for these one by one, and the app adds them for you.

Your files

Drop your resume here
or click to choose a PDF or Word file

Resume.pdf **Resume**

Resume
Resume.pdf

Cover letter (optional)
CoverLetter.pdf

Not in the list? Drop the file into the box above, then pick it here.

Second resume (optional)
None

Third resume (optional)
None

...use it for job titles containing

STEP 4 Connect your job Gmail (in Settings, 5 minutes)

This lets the app find replies from companies and job links from your job alert emails. It only reads: it never sends from, deletes or changes your emails. Gmail needs a special app password:

1. Sign in to your job Gmail, then open myaccount.google.com.

2. Click Security and turn on 2-Step Verification if it's off.
3. Open myaccount.google.com/apppasswords, type Career Hub, click Create, and copy the 16-letter password.
4. In the app: Settings, then Job email. Fill in the address, paste the app password, Save changes, then Test connection.
5. Optional: a second or third job Gmail can be added in the same place (each needs its own app password). The app reads all of them.

Job email Test connection

Reads your job Gmail for replies from companies. It never sends from, deletes or changes your emails.

Job Gmail address **Gmail app password**

harshitha.jobs@gmail.com abcdabcdabcdabcd

Not the normal Gmail password: a 16-letter app password. The guide shows how to make one.

Check this inbox automatically

iges ☒ On Discard Save changes

While you're in Settings: under Help, add your helper's email so problem reports reach them, and under Job-site logins, choose the password the app uses when it creates new job-site accounts.

Part B: applying

Every time you want to apply.

STEP 5 Paste links and press Apply

How	What to do
One job, fast	Paste the link into the box at the top of Home and press Apply.
A few jobs	On Apply, paste several links. Each becomes a chip showing the site. Press Apply to N jobs.
Save for later	Collect links during the week with Save for later, then Apply to all saved jobs.
Let me check each page	On: you see each page before it moves on. Off: it goes straight to Submit. Keep it on for your first few jobs.

STEP 6 Watch it work

A separate Chrome window opens with the job (it has a small purple label at the bottom-left). The app clicks Apply, signs in or creates your account, and fills page after page. A bar at the top shows which job it's on; Stop ends the run any time without sending anything. When the app needs you in Chrome (a robot check, signing in, a captcha, or before Submit), the Chrome window jumps to the front and you hear a sound. If you are away, it reminds you again after a few minutes.

Things you do yourself	What to do
"Check your email"	Open your inbox, click the verification link, then continue in the app.
LinkedIn, Google, Indeed or Naukri logins	Log in once in the app's Chrome window. It stays logged in.
"I'm not a robot" or a code by SMS	Complete it in Chrome.
"I need your help in Chrome"	Do the step in Chrome, then click the first button.

STEP 7 Answer new questions, once each

When a site asks something new, a card pops up. Click an answer (or press its number), or type one.

- **Skip this time** leaves it empty now. **Never ask this again** always leaves it empty.
- For uploads, your files are listed. Add new ones in Profile, then Refresh list.
- With the AI helper on, written questions get a **Draft with AI** button. Read the draft, fix anything that isn't true, then save.
- If an old answer mentions another company, the app shows it to you to edit instead of reusing it.
- Before each page is filled, a Check before filling card lists every answer the app is about to type. Change anything that is wrong (your change is remembered), or tick Leave empty to skip one. Turn this off in Settings, Applying.

New question

Why do you want to work at Swiggy?

🌟 AI draft below. Read it, edit anything that isn't true, then save.

Swiggy's speed and scale excite me. I've grown D2C brands with Google Ads, Meta Ads and CleverTap, and I'd love to bring that to user acquisition here.

Enter to save, Shift+Enter for a new line **Save answer**

🌟 Draft with AI Skip this time Never ask this again

New question

Monthly ad budget you have managed

The site marks this as required. Your answer is remembered for next time.

1 Under ₹1 lakh

2 ₹1-5 lakh

3 Above ₹5 lakh

Skip this time Never ask this again

STEP 8 Check each page

Rows in orange are best guesses (for example your "No" matched to "No, I don't need sponsorship"). Check them in Chrome. Required boxes that are still empty are listed too.

Check this page

Page 3 filled

"Application questions"

Check the page in Chrome. Anything you change there yourself is kept.

Notice period	30 days
Which tools have you used?	Google Analytics, Google Ads, Meta Ads Manager, HubSpot
Will you require visa sponsorship?	No, I don't need sponsorship ⚠️ best guess from "No"

Next page Fill this page again Stop here & show summary

STEP 9 Decide: send or not

Button	What happens
Submit it for me	The app clicks Submit and looks for a "thank you" message. If it can't see one, it asks you.
I submitted it myself	You clicked Submit in Chrome.
Don't submit	Nothing is sent; finish it later on the website. It shows as a draft.

Ready to send

Ready to submit?

Swiggy, Growth Marketing Manager

Everything the app filled is below, and in a summary tab in Chrome.

⚠ These required boxes are still empty: Portfolio URL

First name	Harshitha
Email	harshitha.jobs@gmail.com
Resume	Resume.pdf
Notice period	30 days

Submit it for me **I submitted it myself**

Don't submit (keep as draft)

A small celebration plays when an application is sent. With several links, the next job starts by itself.

LinkedIn, Indeed and Naukri: safe use

New in version 2.3. These sites don't like automatic tools, so the app goes slowly on purpose.

You can paste LinkedIn, Indeed and Naukri job links into Apply like any other link. Under your job list, the Apply page shows how many applications are left today on each site (for example "LinkedIn: 7 of 10 left today"). To keep your accounts safe, the app follows these rules by itself:

Rule	What it means for you
Daily limit	At most 10 applications a day on each of these sites. Links over the limit stay in your Apply list for tomorrow. Change the number in Settings, Applying, but lower is safer.
Slow and steady	The app waits 25 to 70 seconds between two jobs on the same site, like a person would. You'll see "Waiting..." in Activity. Stop works during the wait.
If a site checks you're human	A card asks you to solve the check in Chrome. If it asks again, or you choose Stop for today , the app rests from that site until tomorrow.
You log in	Log in once in the app's Chrome window. The app never types your password on these sites.
You press the last button	The app always stops before the final Submit, as everywhere else.

Tips

Keep **Let me check each page** on for these sites.

Don't run the app on LinkedIn for hours. A few jobs a day is plenty.

If a site shows a warning or restricts your account, stop using it for a few days and tell your helper.

Part C: finding jobs and following up

New jobs that fit you, and every reply in one place.

STEP 10 Find jobs

- The top shows what the app read in your resume. Add or remove job titles (type and press Enter).
- Choose where to search. Find jobs for me (the easiest) checks the job pages of many companies for roles that fit your resume and cities. Only companies I choose looks only at the companies you add: type a name and press Enter, or paste a careers-page link. Some companies, like Swiggy or Zomato, use their own job website, which the app can't read; the note above the results names them. Tick Show all their openings to see every job there, not only the ones that fit you. Repeat this search daily runs it again each day when you open the app.
- After a search you see only what that search found; a link above the results shows the jobs found before. Each result has a match ring: how well it fits your resume. Untick what you don't want, then Apply now or Save for later.
- Too many results? Use the filter box, the date and match lists, and the sort list above the results. Select all only picks what is showing. The Apply list has a filter box too.
- If a job is one you already applied to through another link, the result says so in red and starts unticked, so you don't apply twice.

Cities, words to skip, minimum match and job age are in Settings, Finding jobs.

Jobs from LinkedIn, Indeed and Naukri alerts

These sites can't be searched by the app, but their **job alert emails** work well:

1. On each site, create a job alert for your kind of job and send it to your job Gmail.
2. The app reads the alert emails when it checks your inbox and adds the job links to Find jobs. Look for "LinkedIn alert", "Indeed alert" or "Naukri alert" in the company column.

3. On Find jobs, the alert-email links sit in their own box under your real jobs: press Show to open it. The Alert emails choice above the list shows all alerts, one site only, or none.
4. Tick the ones you like and press Apply now or Save for later.

These jobs have no match percentage, because the app has only seen the email, not the full job.

STEP 11 Home: what needs you

Home shows your funnel: saved, applied, heard back, interviews and offers. Click a stage to see those jobs. Under the greeting, a Today line shows interviews today or tomorrow, drafts waiting for Submit, and jobs to follow up: click one to open it. Next up shows your closest interview, how long to go, a Join call button when the email had a link, and About (the company) for a short brief.

Needs you lists interview invites, tests and offers from your inbox: open the email, then click Done.

The app reads your job Gmail by itself when it opens and then every hour. Press Check email to do it right now: a spinning circle shows while it works, with a count of the emails it has scanned and read. Home shows the latest 8 emails; See all opens the full list, 25 at a time.

Calendar: when an interview email gives a date, it appears on the calendar by itself (marked "from your email"), with the call link, who you will meet and the round when the email says so. A reminder pops up an hour before (or at 8 in the morning if there is no time). Add one yourself with + Add interview, or press the small calendar button on an interview in Needs you. Click a day to see what is on it.

Your last 7 days: below the funnel, a small summary shows applications sent (and how many the week before), replies, interviews or tests and offers, with a bar chart of the last 8 weeks. These numbers come from the same job cards as the boxes above, so they always agree. It also tells you when applications have had no reply for a week, so you can send a short follow-up.

To-do: type a reminder and press Enter. Tick it when done, and Clear done removes the ticked ones.

After more than 6 rejection emails, the app shows a kind note. Every no is part of a job search, so keep going.

STEP 12 My jobs board

- Each column is a stage. Cards move by themselves when emails arrive.
- Drag a card to another column to change it yourself (for example after a phone call).
- Waiting for reply: an interview card moves here by itself once the interview date has passed, so you can see who still owes you an answer.
- No response: a job you applied to 30 or more days ago, with no reply at all, moves here by itself. Drag it back if you still want to follow it up.
- Click a card for its details: stage, links to the job and the latest email, your notes (saved as you type) and every email about that job.
- Interview or Test cards show a Get ready box: the date and time, a checklist, and (with the AI helper on) Get prep tips, which writes likely questions, talking points from your resume and questions to ask. Add tips to my notes saves them on the card.

- Use the search box and the stage list above the board to narrow it down. Search also works on Emails, Accounts and Found.
- The tabs at the top switch to a List, all Emails, your job-site Accounts (passwords hidden until you click Show) and Found jobs. **Open in Excel** exports the list.

The Resume page

- Your resume is on the left. As it looks shows the PDF; As job sites read it shows the text that application systems see, with marketing keywords highlighted. If that view is almost empty, job sites can't read your file: save it again as a PDF from Word or Google Docs.
- Health gives a score out of 100 and a short list of what to fix, most important first (numbers in your results, a LinkedIn link, a skills heading and so on).
- Fit to a job: paste a job link or the job text and press Check the fit. Red words are what the job asks for that your resume doesn't have yet; add the ones that are true for you. With the AI helper on, Suggest rewrites writes a new summary and better versions of your own lines.

- Skills shows, for the roles you look for, which skills your resume already shows and which to build, each with a free course.
- Files holds your resume, a second and third resume for other kinds of roles (with the job words that pick them), and your cover letter. Changes there save by themselves.

Reach out: write to companies and agencies

Reach out saves you the work of writing to hiring teams one by one. Open Reach out in the left pane.

1. Paste company or agency websites, or email addresses, one per line, and press Find emails. The app looks for the hiring email on each site. A site with only a contact form has none: open its Contact link, copy an address, and type it in, or untick it. Add from my Gmail lists people who wrote to you and people you wrote to before.
2. Choose what to do with the mails: read each one first (best), save them as Gmail drafts and send them yourself, or send straight away. The app writes one personal mail per company with your resume attached.
3. Under How the mail should sound, choose the tone and length, the roles you want, what to always include and never include, and the subject line. Show me a sample mail lets you hear it first.

The app sends at most 20 mails a day, with a short pause between each, and never writes to the same address twice. Every mail ends with a polite line that they can tell you if it is not relevant. How it is going shows how many mails you sent, who replied and who else wrote to you. If someone reached out another way (WhatsApp, LinkedIn, a phone call), write it down in Reached out another way.

STEP 13 Saved answers

At the bottom of Profile: every answer you've given. Edit one, switch **Ask me** on to be asked again, or delete it. Changes save straight away.

Part D: settings, help and updates

Make it yours, and keep it running smoothly.

STEP 14 Appearance

Settings, Appearance: choose a colour theme. Clean white (white pages with a charcoal side panel) is the default; Sand, Emerald, Slate and Mint are the others. Under Letters, pick the style of writing you like: Classic, Friendly, Elegant, Bold or Handwritten. Calm mode turns off the small animations. Or press Ctrl+K (⌘K on Mac) and type "theme".

STEP 15 AI helper (optional)

- Settings, AI helper, Which AI to use: Free needs nothing and is already on. NVIDIA (free key) writes better: sign in free at build.nvidia.com, open any model, choose Get API key, and paste it in NVIDIA API key. Claude (paid): make a key at console.anthropic.com, add a little credit under Billing, and paste it in Claude API key.
- Free and NVIDIA send the job text and your resume text to an online AI service; Claude is paid. Written questions now get Draft with AI.
- Switch on **tailored cover letter** to get one written for each job: you edit it, and it's saved as a PDF and uploaded.

AI helper

With a Claude API key, the app can draft written answers and tailored cover letters. You always review them first.

Claude API key (from console.anthropic.com)

Write a tailored cover letter for every job

☐ Off

Optional. Enables ✨ AI drafts and cover letters.

Always read AI text first

It only uses your resume and the job posting, but fix anything that isn't true or doesn't sound like you. Treat the key like a password.

STEP 16 Something went wrong? Report a problem

- Open **More** at the bottom of the sidebar, click **Report a problem**, write a short note, and send. Your helper gets an email with the activity log and screenshots. Passwords and keys are never included.
- If a run hits errors, the app offers to send a report by itself.
- Got an idea? Open More, click Suggest a feature, describe what you wish the app could do, and send. It goes straight to your helper.
- To see what happened to what you sent, open Settings and look at Your reports and ideas. Each one shows Open, Done or Won't do, with a View link.

Report a problem

What went wrong?

A short note helps, like "Swiggy job stopped on the second page". The activity log and screenshots are attached. Passwords never are.

Swiggy job stopped on the second page

Send report Cancel

STEP 17 Updates and what's new

- **Updates install themselves.** The app checks when it starts and every hour. When there is a new version, a card shows what's new: click **Update now**. The app restarts by itself.
- If a new version ever fails to start, the app puts the previous version back automatically.
- Your data is never touched by updates. A backup is saved before every update, and every day.
- Every version is listed in Settings, What's new. No internet at that moment? Press Updates at the bottom of the left menu (or Check for updates in Settings) to try again. A small "new" tag appears there when an update is waiting.

Your weekly routine

1. Open Career Hub. Look at Needs you on Home and reply to interview invites.
2. Find jobs: your favourite companies plus a web search, and the new alert-email jobs. Apply to the good ones.
3. On LinkedIn, Indeed and Naukri, keep to a handful of jobs a day.
4. Answer the few new questions, check, send.
5. Glance at the My jobs board and add notes after any calls.

Tips for more interviews in marketing

- **Your portfolio link works hardest.** Put 3 to 5 best pieces in one place: a campaign with results, social posts, a content sample, a dashboard.
- **Answer with numbers** the first time a question appears ("Grew Instagram from 8k to 30k in 6 months"). It's reused everywhere.
- **Bulk-apply the long list, hand-craft the short list.** Use the time you save to tailor your resume for your top companies and ask for referrals.
- **Watch your funnel.** Many applications and few replies usually means the resume or portfolio needs work, not more volume.

If something goes wrong

Problem	Fix
Mac won't open a file	See the yellow box in Step 2.
"Not set up yet" in Terminal	Double-click Setup and let it finish.
The app window closed	Double-click Open Career Hub again. (Closing the Terminal window closes the app too.)
"Couldn't read your resume"	Add it in Profile, Your files, and make sure it's a real PDF (not a scan).
A box was filled wrongly	Fix it in Chrome, then correct the answer in Profile, Saved answers.
"Gmail refused the login"	Use the 16-letter app password from Step 4, not your normal password.
An email was sorted wrongly	Drag the card to the right column in My jobs. Your choice always wins.
A site says the password is wrong	The app asks for that site's password. Type it, or choose to log in yourself.
A dropdown inside a dropdown (Workday)	Pick it yourself in Chrome, then Fill this page again.
"Daily limit reached" for LinkedIn, Indeed or Naukri	That's the safety rule. The job stays in your list: try again tomorrow.
"Resting from this site until tomorrow"	The site asked you to prove you're human. Wait until tomorrow, and use fewer jobs a day.
The app seems stuck	Open Activity to see what it's doing, or look for a card waiting for you. It may just be waiting a little between two jobs. Otherwise press Stop.
Find jobs shows few results	Lower the minimum match in Settings, add cities or titles, or add more companies.
Anything else	Report a problem.

Good to know

- **Always review before sending.** Every site is different; the app can occasionally miss a box.
- Your data stays on your laptop, in Harshitha's Data. Passwords are saved there as plain text, so use a password that's only for job sites, and don't share the folder.
- **LinkedIn, Indeed and Naukri don't allow automated tools.** The daily limit and the waiting are there to protect you. Don't try to get around them.
- You always do: CAPTCHAs, codes by SMS, assessments and video interviews.

Using a Windows laptop

Same app, slightly different setup.

- Install Google Chrome if you don't have it.
- Unzip career_hub.zip (right-click, Extract All) and move the folder to your Desktop.
- Double-click **Setup (Windows)**. If Python isn't installed, a page opens: download Python and, in the installer, tick "Add python.exe to PATH" before Install Now. Then double-click Setup again.
- If Windows shows "Windows protected your PC": click More info, then Run anyway.
- Every time: double-click **Open Career Hub (Windows)**. A small black window starts minimised: leave it open. Use Ctrl+K for quick actions.

For the helper

The person who set this up and fixes problems.

Topic	What to know
Reports	Arrive from her job Gmail, subject Career Hub problem report, with a zip: activity log, info.txt (version, computer, masked settings, last 5 jobs), screenshots, last summary.
Releasing	Update the docs first (MAP.md, CLAUDE.md, and this guide). Then bump APP_VERSION in careerhub/config.py, add an entry at the top of CHANGELOG in careerhub/changelog.py, run tools/make_release.py, and push to GitHub. Her app installs it from the Update now card.
This guide	Edit docs/Career_Hub_Guide.docx (the source), then run python tools/make_guide.py to make Career_Hub_Guide.pdf for her. Keep the version in the page header in step with APP_VERSION.
Data	Everything personal is Harshitha's Data/career_data.json plus Files/, Summaries/, Logs/, Backups/. New data goes into that file through Store.upgrade(); never rename or remove existing sections.
Restoring	Close the app, copy career_data.json back from Backups/<date>, reopen. Backups/before-update_... also holds the previous app files.
Job-site limits	careerhub/jobsites.py holds the LinkedIn / Indeed / Naukri rules: daily limit (setting jobsite_daily_limit), pacing, robot-check rest, alert-email links.
Old version	Data from the old Job Autofill layout is moved in automatically on first start (same folder or a job_autofill folder next to it). Originals are kept in Backups/old-files-before-2.0.
